

# What are Services?

- A TypeScript class with logic like calculations, data access, etc.
- Used to write business logic in a clean and reusable way.
- They are marked with `@Injectable()` so NestJS can use them.

# Why We Use Services?

# **TechZeen**

- To separate logic from controllers.
- Makes code modular, clean, and testable.
- Services can be reused in multiple places.
- Helps keep your app organized and scalable.

# Important Points

- Always use `@Injectable()` decorator on services.
- Inject services into controllers using constructor injection.
- Services are part of the Dependency Injection system.
- Logic like fetching data, calculations, or API calls goes inside services.
